

STRATEGY & OPERATIONS

Update Log: New Information Received 8 September 2026

Vytalix company-build documentation · reference
22_UPDATE_LOG_2026-09-08

Status labels apply throughout: KNOWN, VERIFIED, ASSUMPTION, ESTIMATE, TO VALIDATE, PROPOSED. Nothing in this document claims traction, approvals, partners or revenue that do not exist. Governing file: FACTS_BASE.

PREPARED FOR

The Founder, Vytalix

DATE

8 September 2026

VERSION

1.0 · Confidential draft

Contents

What was received	1
What the prototype actually contains (VERIFIED from the recording)	2
Assumptions checked	3
New ideas scored (framework in 20_DECISION_FRAMEWORK.md; cost, regulatory risk and complexity reverse-scored)	4
Knock-on effects and what changed in the repository	5
Immediate actions added	6

Applies the continuous-improvement rule: update the system, check assumptions, identify knock-on effects, improve the model, update priorities, say what changed.

What was received

1. **The Vytalix logo** (heart outline with a circuit trace and node; wordmark "Vytalix"; strapline "Technology for Life"; single colour deep blue, sampled at #153892).
2. **A screen recording of the live MaternaLink prototype** (101 seconds) and the **language-switcher demo** (30 seconds, English/French).
3. **An "Innovation Provisional Proposal"** describing the umbrella group (mission, five objectives) and the naming rationale (Vytal + ix).
4. **Expanded group scope:** Advisory, Consulting, Health Solutions (MaternaLink), E-Learning, plus four new lines: an operating system, an overseas doctor-placement agency ("like a football agency"), sponsorship for African hospitals, and hospital property and build.
5. **MaternaLink product detail:** "Maternity Watch" issued at the week-16 midwife appointment and returned after postnatal discharge; e-care patient database; maternity triage and maternity A&E; shorter appointments; voice tracing of baby movements; daily questionnaire; partner quizzes; symptom logging (itching hands and feet, vomiting); blood-glucose input for women with diabetes; hospitals either replacing or integrating existing systems.
6. **A request:** recreate the current MaternaLink website to a high standard, and price per product and per annual service.

What the prototype actually contains (VERIFIED from the recording)

- Landing page: "Offline-first maternal and newborn monitoring for public health systems"; sections on system-level challenges, how the system works (offline capture, secure local storage, automatic synchronisation, risk engine, automatic clinician and supervisor alerts), who it is for (government programmes, public hospitals, donor-supported initiatives), impact, and security (consent-driven collection, encrypted local storage, secure transmission, GDPR-aligned design). A "Request a pilot" button. English and French.
- Operator login (email and password; "Request access").
- Dashboard: Patients (mother and nested newborn rows with risk badges), Alert queue (severity, assign to me, mark contacted), patient record with Overview (maternal summary, newborns, latest vitals, blood-pressure chart, risk events), Timeline (risk evaluations with reasons such as BP_HIGH and PULSE_HIGH and **suggested actions such as "Immediate clinician review" and "Refer to higher facility"**), Notes, Voice diaries (upload), CSV/PDF export, an Admin tab in one version.
- Test data uses photographs of identifiable people and names that look real. No evidence of real patient data, but this must be confirmed and the photos removed.

Assumptions checked

Prior assumption	Status after new information
A4: v1 should be non-diagnostic care coordination	Reinforced. The prototype already ships a risk engine that suggests clinical actions; that is clinical decision support and must be brought under an intended-use statement and, if kept, a medical-device pathway. Re-scoping is now more urgent, not less.
Brand palette (teal) chosen in 03_BRAND_SYSTEM.md	Overtaken. The real logo is deep blue #153892. Brand system and both websites re-skinned to Vytalix Blue; teal retired.
Product name "MaternaLink"	Inconsistent with the prototype ("MaternalLink" / "Maternal Link"). Decision: MaternaLink (per the founder's brief) everywhere; trademark search must cover both spellings.

Prior assumption	Status after new information
Ekiti pricing £300/woman/year	Retired. Replaced by 21_MATERNALINK_PRICING.md (UK £18–£36; programme £4–£10 per woman per year, plus modules and service).
Group has four pillars	Extended with four proposed lines; scored below.

New ideas scored (framework in 20_DECISION_FRAMEWORK.md; cost, regulatory risk and complexity reverse-scored)

Idea	Fit	Rev	Demand	Speed	Cost	Scale	Adv	Reg	Complexity	Leverage	Total	Verdict
Maternity Watch as a Vytalix-manufactured device	7	6	4	1	1	7	5	1	1	3	36	KILL (manufacture); re-enter as "integrate a certified wearable" (scored 58, TEST, after v1)
Maternity Triage module (rules owned by the provider)	9	7	6	5	6	8	7	4	5	8	65	TEST with one maternity assessment unit; regulatory opinion first
Woman & partner engagement (daily check-in, symptom log, partner quizzes)	10	7	6	7	8	9	6	7	7	9	76	BUILD into v1 (non-diagnostic; routes to humans)
Diabetes glucose tracking	8	5	6	5	7	8	5	3	5	6	58	DEFER to v2 pending classification
Voice tracing of baby movements (analysis)	6	3	3	1	2	8	7	1	1	3	35	KILL as a feature; research track only
Overseas doctor-placement agency	4	7	7	6	7	4	4	4	4	3	50	DEFER: real market (international recruitment, ethical-recruitment codes, licensing, GMC/host-country registration) but a different business; if pursued, separate entity and specialist partner; never inside the health-tech cap table
Sponsorship for African hospitals	5	3	6	5	8	3	3	8	5	3	49	DEFER: fits Advisory as a fundraising/partnership service, not a division

Idea	Fit	Rev	Demand	Speed	Cost	Scale	Adv	Reg	Complexity	Leverage	Total	Verdict
Hospital property and build	3	6	5	2	1	4	3	5	1	2	32	KILL as a Vytalix division; the founder's Kemek Enterprise is the natural home if ever pursued; keep Vytalix's cap table clean for health-tech investors
"Operating system" (a Vytalix operating platform for hospitals)	6	5	3	2	3	8	4	5	2	4	42	KILL as stated (undefined, huge scope); re-enter only as a named product with a buyer

Knock-on effects and what changed in the repository

1. **Brand:** 03_BRAND_SYSTEM.md updated; corporate website CSS re-skinned to Vytalix Blue; real logo files added (website/assets/img/vytalix-logo.png , vytalix-mark.png).
2. **MaternalLink website rebuilt** at /maternalink-site/ (landing with EN/FR, platform, programmes, security, pricing, request-a-pilot, operator login, demo dashboard with clearly labelled demo data) to the Vytalix standard, with all claims traceable to FACTS_BASE.
3. **Pricing:** 21_MATERNALINK_PRICING.md (this is the answer to "help me with pricing, per product, annual service").
4. **Product:** product/MATERNALINK_FEATURE_ADDENDUM.md maps every requested feature to version, regulatory posture and evidence needed.
5. **Facts base:** §1 extended with the prototype contents, logo and scope; §3 adds decisions A9–A12.
6. **Group structure:** the agency, sponsorship and property ideas are recorded as out-of-scope for the health-tech entity; Advisory may sell "hospital partnership and sponsorship strategy" as a service.
7. **Priorities:** unchanged order (IP → entity → claims → revenue → investors → product) with one addition: **prototype audit moves from Day 30 to Day 14** because the risk engine's suggested actions and the identifiable test photos are live on a public URL today.

Immediate actions added

- Day 1–3: remove identifiable photographs and confirm no real patient data on the public prototype; restrict the Vercel URL behind authentication.
- Day 3: adopt the intended-use statement; document the risk engine as programme-configured rules pending a regulatory opinion.
- Day 14: prototype code and security audit (brought forward).
- Day 21: pricing validation interviews scheduled using 21_MATERNALINK_PRICING.md worked examples.
