

THE PLAN

Brand and websites

What the company is called, what it looks like, how to write as it, and what is already built online.

Status labels apply throughout: KNOWN, VERIFIED, ASSUMPTION, ESTIMATE, TO VALIDATE, PROPOSED. Nothing in this document claims traction, approvals, partners or revenue that do not exist. Governing file: FACTS_BASE.

PREPARED FOR

The Founder, Vytalix

DATE

8 September 2026

VERSION

1.0 · Confidential draft

What the company is called, what it looks like, how to write as it, and what is already built online.

In one minute

- The group is Vytalix. The first product is MaternaLink. Each is spelled one way only.
- The repository is spelled "Vitalyx". That is a typo and needs fixing.
- Other companies already use names close to Vytalix. Clear this before you spend money.
- The logo, the colours and the two fonts are settled. Nothing there needs redesigning.
- Two websites are built and live, but both are full of placeholders and not launch-ready.

What to do

Action	Who	By when
Order a trade-mark search in classes 9, 42 and 44	You, with a trade-mark attorney	Within 30 days
Check the name at Companies House and buy the domain	You	Within 30 days
Change every "Vitalyx" to "Vytalix" in the repository	You	Within 14 days
Fill in every square-bracket placeholder on both websites	You	Before any public launch
Get a solicitor to read the privacy, terms and cookie pages	Solicitor	Before any public launch

The name

Thing	The decision
The group	Vytalix — the parent company that owns everything
The product	MaternaLink — one product inside the group, in development
Spelling	One word. No hyphen, no space. Capital V, and capital M and L.
Product spelling	MaternaLink with one "l" in the middle, not "MaternalLink"
Tagline	Technology for Life
Repository	The name "Vitalyx" is wrong. Fix it.

The prototype site says "Maternal Link" and "MaternalLink". Both spellings are retired.

Names that already exist and must be cleared. All VERIFIED (we saw them in public records).

Name	Where it is	Why it matters
Vytalix Inc.	United States, Austin, Texas — health technology	Nearly the same name in nearly the same trade. Highest risk.
Vytalize Health	United States, New Jersey — health care	Sounds identical when spoken aloud.
VITALIX LTD, two companies	UK, numbers 16813455 and 15155964	Companies House can refuse a name that is too similar.

Name	Where it is	Why it matters
VITALX LTD and VYTAL(UK) LIMITED	UK	Lower risk, but any search will find them.

TO VALIDATE (not checked yet, so treat as unknown): whether Companies House will accept the name, and whether a trade mark can be registered. Do not order signs, printed paper, or a trade-mark filing until an attorney has said yes.

If the name has to change, the cost is a new wordmark and a find-and-replace. The colours, fonts and writing rules below all still work.

The look

The logo is real and is the founder's own. It is a heart outline whose right-hand stroke becomes a circuit line ending in a dot, next to the word Vytalix and the line "Technology for Life".

Do not redraw it, recolour it, or stretch it. Leave clear space around it equal to the height of the "V". Use the heart on its own only where the logo would be under 120 pixels wide. The files are `website/assets/img/vytalix-Logo.png` (whole logo) and `vytalix-mark.png` (heart only).

The main blue was sampled straight from the logo file, so the brand matches the logo rather than the other way round.

Colour	Hex	Where it goes
Vytalix Blue	#153892	The logo, links, main buttons
Blue Dark	#0E2A70	A button when the mouse is over it
Deep	#0F2354	Dark panels behind headings
Ink	#0F2233	Body text
Slate	#46545F	Smaller, less important text
Ember	#BF3E27	The one warm accent. Never more than 5% of a page.
Bone	#F7F4EE	Page background
Mist	#E9EDF8	Tinted bands between sections
Signal Blue	#9DB8FF	Highlights on dark panels. Never text on white.

Typeface	Used for	If it cannot be installed
Fraunces	Headings and big numbers	Georgia
Manrope	Body text, buttons, labels	Arial

How to write as Vytalix

1. Say the stage you are at. You are pre-seed and founder-led. Say so.
2. Keep sentences under 25 words. One idea per paragraph.
3. Never claim a customer, partner, approval, clinician or result that does not exist.

4. Every number carries its source. If you cannot cite it, delete it.
5. Write "we" and "you". Not "the company" and not "it is recommended".
6. Put anything unknown in square brackets, so it cannot be published by accident.

Say this	Not this
"MaternaLink is in development. It supports coordination. It is not a diagnostic tool."	"MaternaLink predicts and prevents maternal complications."
"We are founder-led and pre-seed. Here is what we can do today."	"Trusted by leading NHS trusts."
"We will tell you if your idea should not be built."	"We turn every vision into reality."
"Accreditation is being explored. Our courses are not accredited yet."	"CPD-certified courses."
"Register your interest. We will post roles when we can pay for them."	"Join our fast-growing team."
"[Registered office address — add after incorporation]"	An address you do not have

Banned words in anything you publish: revolutionary, cutting-edge, world-class, seamless, leverage, and "solutions" used as filler.

The two websites

Both are plain HTML. There is nothing to compile and no third-party code beyond the fonts.

Site	Live address	What is on it
Vytalix group	https://elkelvinwilliams.github.io/Vitalyx/	14 pages: home, about, the four pillars (advisory, consulting, health solutions, e-learning), MaternaLink, partnerships, insights, careers, contact, privacy, terms, cookies. Folder: <code>website/</code> .
MaternaLink product	https://elkelvinwilliams.github.io/Vitalyx/maternalink/	8 pages: home in English and French, platform, programmes, security, pricing, pilot request form, plus a demo login and a demo dashboard with made-up data. Folder: <code>maternalink-site/</code> .

The MaternaLink pages were rewritten so that nothing claims a medical device or a clinical decision. The rules that raise an alert are described as settings the health provider chooses, reviewed by a human.

Placeholders to fill before a real launch. Search each page for the character `[` to find them all.

Placeholder	Note
Registered company name and number	Needs the company to exist first
Registered office address	Same
ICO registration number	ICO is the UK data-protection regulator you must register with
Contact email and social links	No phone number until a real business line exists
The domain in <code>sitemap.xml</code> , <code>robots.txt</code> and the page headers	Buy the domain first
The contact form and the pilot form addresses	Point them at a real form service and test them

Placeholder	Note
The sharing image used when a link is posted	Render it from <code>assets/img/og-image.svg</code>
The legal entity line in the MaternaLink footer	Needs the company to exist first

Also before launch: a solicitor reads the three legal pages, the French translation gets a professional check, the demo login goes behind real security, and someone checks every claim against `/FACTS_BASE.md`.

What still needs making

Item	Status
Slide template for decks	TO DO — the layout is specified, nobody has built the file
Letterhead and proposal template in Word	TO DO
Email signature	TO DO — name, role, "Vytalix · Technology for Life", no phone yet
LinkedIn post templates	TO DO — three layouts specified
Photography	NONE — use the drawn illustrations until real photos are paid for
Sharing image for links	TO DO — render from the SVG already in the repository

Never buy stock photographs of doctors in white coats. They suggest a clinical partnership you do not have.

Words explained

Word	What it means
Wordmark	The company name drawn as artwork, rather than typed in a font
Hex	The six-character code that tells a screen exactly which colour to show
Placeholder	Text in square brackets standing in for a fact you do not have yet
Trade mark	A registered legal right to use a name in a defined line of business
ICO	The Information Commissioner's Office, the UK data-protection regulator
Static site	A website of finished pages, with no database and nothing to run on a server
