

THE RULE BOOK

The facts: what is true, what is a guess

The rule book for everything else. If a document says something this file does not support, this file wins.

Status labels apply throughout: KNOWN, VERIFIED, ASSUMPTION, ESTIMATE, TO VALIDATE, PROPOSED. Nothing in this document claims traction, approvals, partners or revenue that do not exist. Governing file: FACTS_BASE.

PREPARED FOR

The Founder, Vytalix

DATE

8 September 2026

VERSION

1.0 · Confidential draft

The rule book for everything else. If a document says something this file does not support, this file wins.

In one minute

- This file separates what has been checked from what is a guess. Every other document must agree with it.
- Six things are proven to exist. Everything else is a plan.
- Twelve important things are unknown. They are listed so nobody pretends otherwise.
- Twelve decisions have been taken to move forward. Each can be changed if you disagree.
- Five sentences must never appear in anything you send out. They are at the bottom.

What to do

Action	Who	By when
Read the "not known" list and answer what you can	You	This week
Correct anything in the "proven" list that is wrong	You	This week
Update this file whenever something moves from guess to fact	You	Ongoing

Checked on 7 and 8 September 2026.

What is proven

#	What	How we know
1	The code repository was empty. One file, one line of text	Seen directly
2	A logo exists: a heart with a circuit line, the word Vytalix, the line "Technology for Life", in blue #153892	You supplied the file
3	A slide deck from October 2025 proposes AI that predicts pre-eclampsia, sepsis, bleeding and blood clots. There is no data, no model, no clinician and no permission behind it	The deck itself
4	A proposal went to Ekiti State, Nigeria in March 2026, signed by David Agunede as "Founder and CEO, Maternal Link". £4.5m for 15,000 women, £300 per woman per year. No reply is recorded	The emails
5	A prototype website exists at maternal-health-psi.vercel.app. It has patients, alerts, timelines, notes, voice diaries and a risk engine that suggests clinical actions. Test records use photographs of real-looking people	A screen recording you sent
6	Ekiti State already has a maternal digital health programme called Digital Mom, run by mDoc and paid for by MSD for Mothers. About 24,000 women were signed up by January 2026	Nigeria Health Watch and other public reporting

Also checked: no company called Vytalix or Vitalyx was found on the public record. Similar names do exist, including two UK companies called VITALIX LTD, a US health-tech company called Vytalix Inc, and Vytalize Health in New Jersey.

What is not known

Nobody has answered these. Where a document has to assume something, it says so.

#	Question
1	Is any company registered, where, and who owns the shares?
2	What, if anything, has been agreed with David Agunede?
3	Who wrote the prototype code and who owns it?
4	Has any real patient information ever been entered into the prototype?
5	Is the Ekiti proposal alive, dead or being negotiated?
6	Has any other government been approached?
7	Are there any letters of intent, advisers, clinicians or institutions attached to MaternaLink?
8	How much money can you put in, and how much time each week?
9	What is your own professional background, in one paragraph an investor would accept?
10	Does anyone hold a domain name, trademark or social media handle for Vytalix?
11	Is there any insurance, accountant or bank account?
12	Has anyone been paid anything, by anyone, for any of this?

The decisions taken

These are choices, not facts. Say so if you disagree.

#	Decision	Why
1	The company is called Vytalix. The repository name "Vitalyx" is treated as a typing mistake	Your brief uses Vytalix
2	The product is MaternaLink, one word, no hyphen	The prototype uses three different spellings. Pick one
3	Home market is the United Kingdom. Second market is Nigeria	Where the conversations already are
4	The company is pre-seed with no revenue. Nothing here records an achievement	True today
5	MaternaLink version one keeps a woman connected to a midwife. It does not diagnose, predict or recommend treatment	Keeps it out of medical device rules while evidence is built
6	The AI risk score becomes a research project, not a product feature	No data, no evidence, no permission
7	The £300 per woman per year price is withdrawn	Far above anything comparable
8	Money comes from advice and consulting first. MaternaLink is the long-term value	Services pay within weeks. The product does not
9	Funding order: grants, then angel investors with tax relief, then a seed round	Cheapest money first
10	Any rule that flags a patient is owned by the hospital's own clinicians, not by Vytalix	This is what keeps the software out of medical device rules
11	If a wearable is ever used, it is a certified one rented from someone else. Vytalix never manufactures a device	Two years and over £1m otherwise
12	Doctor placement, hospital sponsorship and hospital property are not part of this company	They are different businesses and would confuse investors

How to label things

Label	Means
VERIFIED	Somebody checked it and has the source
KNOWN	Established fact, not in dispute
ASSUMPTION	We chose to believe this to move forward
ESTIMATE	Our best guess at a number
TO VALIDATE	Must be checked before you rely on it
PROPOSED	An idea we are putting forward, not a decision
NOT PUBLICLY AVAILABLE	We looked and could not find it. We did not guess

Five things never to say

1. "NHS approved" or "approved by the NHS."
2. "Clinically validated" or "clinically proven."
3. "CE marked", "UKCA marked" or "registered with the MHRA."
4. "Our government partner" or the name of any ministry as a partner.
5. "Reduces maternal deaths" or any claim about medical outcomes.

Instead say: designed to support, intended to, we aim to, subject to testing, proposed, in development.

Two rules for the investor and partner lists

- A phone number appears only if it was found in a public source, with that source recorded. Otherwise the entry says "not publicly available". No number is ever guessed.
- An email address appears only if it is published on the organisation's own website. Nobody's address is constructed from a name.
